How to find the legs for your sofa

Some sofas will arrive with the legs already attached, others will be packed inside the sofa and require attaching. To find your sofas legs, turn the sofa over and you will see a zipper in the fabric base, open the zipper and the legs will be tied inside. The zipper shape may be different on the model you have.

How to install your sofa legs

There are a few different ways legs can be attached to our sofas.

Type 1 -

For the legs that have a single hole in the centre like the one beside, place the black nylon washer between the sofa and the leg then use a size 2 long Phillips head screw driver to screw in the bolt. Turn the screwdriver until the legs are tight. Once it is tight push the white cap into the hole at the bottom of the foot to protect your floor.

Please note that spinning the leg once it is in place will not tighten the screw you need to tighten with the screwdriver through the hole.

Breakdown of leg components; nylon washer and bolt

How to install your sofa legs - cont'd

Type 2 -

For the legs that have two holes on metal pieces attached to the leg, simply use a Alan key to screw in the bolts. Turn the key until the legs are tight (Part A)

Don't forget the centre support leg if your sofa has one. Not all do so don't worry if you didn't get one. Put the washer in between the sofa and leg then screw the leg in by hand (Part B). Some centre support legs are adjustable, please adjust to the correct height once the sofa in position.

Type 3 -

Screw the large bolt into the large hole and tighten with a Phillips head screwdriver

The self tapping wood screw (i.e. the smaller one) goes into the small hole but please note that there is no pre drilled hole for the small screw, use a Phillips head to screw into the wood and tighten

Connecting your modular

Check out our short YouTube video series that highlights these assembly instructions. Visit the link below:
<https://bit.ly/2DEYd1h>

All modulares will have connector clips to hold the pieces firmly together. It can be a bit tricky and may take a few goes to get them all in. There are 4 different types of clips on our sofa's.

Type 1 -

Lift up the modular piece with clip A and slide into the modular piece with clip B.

Type 2 -

Alligator connectors will be tucked in under the sofa.

Swivel them out so they are pointing out from the sofa, align the modular pieces and slide the alligator clips into place.

Type 3 & 4 -

This type of connector is only used on our Emmerson, Vancouver and Atlanta recliners models.

To connect lift up the modular piece A and place into the cut out on modular piece B.

Electric recliners

If you have purchased an electric recliner sofa you will need to find the transformers and connect them to the sofa.

The transformers are tucked under the sofa in white boxes and tied to the recliner mechanism (see Image 1).

You will need to tip your sofa on its side to find them.

Each recliner mechanism requires its own transformer and plug (for the wall)
